QuarryChain

Advanced Blockchain Network

"Get quality, with quarry"

Investor Presentation

https://quarrychain.network/
alec.arrambide@gmail.com

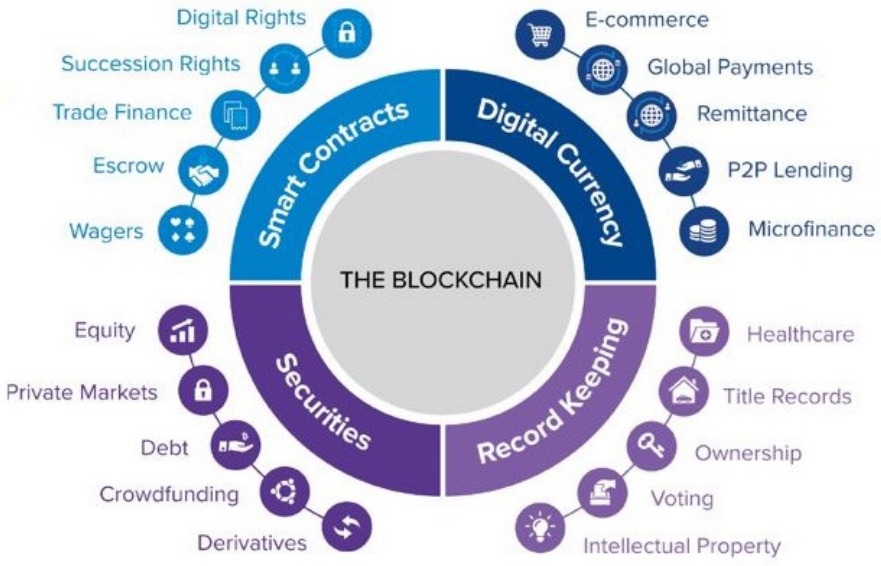
Overview

QuarryChain is an **advanced blockchain network** that **solves major roadblocks** to the adoption of blockchain technology, enabling businesses and industries around the world to continue **using, scaling, and reaping the benefits** of this increasingly important technology.

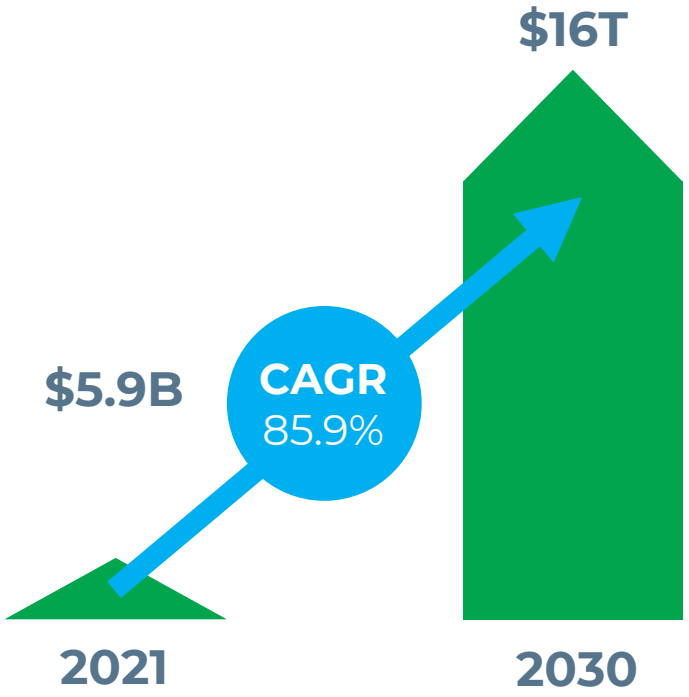
https://quarrychain.network/
alec.arrambide@gmail.com

Blockchain technology has found growing application in industries around the world

Current Use Cases[1]



Market Size[2]



[1] The Goals of Cryptocurrency, Blockchain, Nair
[2] Blockchain Technology Market Size, Grand View Research
[3] Crypto $16 Trillion by 2030, Forbes, Digital Assets

https://quarrychain.network/
alec.arrambide@gmail.com

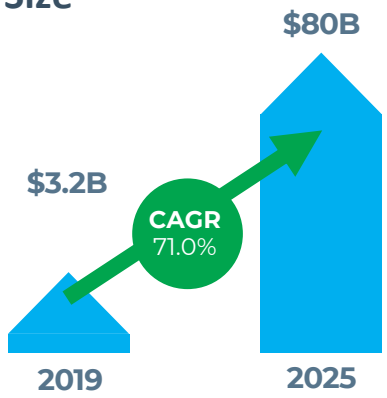
And blockchain-powered solutions are creating massive new markets

Decentralized Applications (DApps)

The range of use cases for DApps span a broad range of industries and include:

- Financial products
- Governance
- Web browsing
- Social media
- Gaming
- And more!

DApp Market Size[1]



Asset Tokenization

Tokenization of assets unlocks liquidity, drives trading volumes, and can be used for almost anything, including:

- Equities
- Commodities
- Physical art
- Investment funds
- Real estate
- And much more!

Tokenization Market Size[2]

But fundamental flaws in current blockchain implementations restrict growth potential

Proof of Work (PoW)

High-powered computers compete to solve complex mathematical puzzles and validate transactions in return for cryptocurrency rewards

- Mining pools have **centralized control** and focus resources on **hoarding tokens** rather than benefiting the networks and their participants.
- Requires extremely high amounts of computational power, which consumes **vast amounts of energy**, **slows** transaction speeds, and increases **costs**.

Proof of Stake (PoS)

Cryptocurrency owners stake coins and the protocol selects a validator who adds a new block of transactions in return for rewards.

- More environmentally friendly and scalable than PoW, but carries **security risk** as validators with large holdings can excessively influence the network.
- Many PoS networks charge **high fees** and can be **very slow**.

The Environmental Cost

*Each Bitcoin transaction uses around 2100 kilowatt hours (kWh) - roughly what an average US household consumes in **75 days**. Bitcoin mining currently generates **22-22.9M metric tons** of carbon dioxide emissions a year.*

[1] Is Cryptocurrency Bad for the Environment?, Fair Planet
[2] Factbox: How big is Bitcoin's carbon footprint?, Reuters

https://quarrychain.network/
alec.arrambide@gmail.com

At scale, these flaws cause issues that hinder the growth of blockchain and limit further adoption

Slower speeds

Centralization and governance issues

Higher transaction fees

Serious environmental impact

https://quarrychain.network/
alec.arrambide@gmail.com

QuarryChain *solves key issues* with current blockchain technology, *removing roadblocks* to *faster growth* and *adoption*

https://quarrychain.network/
alec.arrambide@gmail.com

What is QuarryChain?

QuarryChain is an **advanced blockchain network** and **ecosystem of tools** that enable developers to create and deploy smart contracts and decentralized applications (DApps), freely own, and store data and other content, at **high speed**, **low cost**, with **minimal environmental impact**, and with **greater decentralization** and governance over current blockchains.

Key features

Delegated Proof of Stake (DPoS) consensus mechanism

QuarrySwap Decentralized Exchange

Tokenization of real-word assets

https://quarrychain.network/
alec.arrambide@gmail.com

Delegated Proof of Stake (DPoS) consensus mechanism

How it Works

- Elections are held daily to elect Quarry Miners who will produce blocks for the network
- The Community (StakeHolders) need to have the ability to elect those with specific skills, public credibility, and expertise to fill the roles that are lacking in the system.
- Voters evaluate candidates based on criteria such as their history of submitting or sponsoring proposals.
- The top candidates are appointed Quarry Miners and voting participants receive rewards.
- Anyone with a powerful computer and fast, reliable internet connection can become a Quarry Miner on QuarryChain.

Benefits

Extremely high-speed blockchain
20,000 – 100,000 transactions per second (TPS) vs Bitcoin's 3 TPS and Ethereum's 15-30 TPS.

Low transaction fees

Energy efficiency and environmentally friendly
QuarryChain will be among the best-of-the best environmentally-sound blockchain solutions

A more democratized and decentralized governance structure
QuarryChain's voting structure ensures that no single individual or party has undue influence over the network.

QuarrySwap
Decentralized Exchange (DEX)

QuarrySwap DEX enables users to safely and securely trade and stake a variety of crypto tokens.

Self Custodial

Users of QuarrySwap **do not need to transfer their assets to a third party**. Therefore, there is no risk of a company or organization being hacked, and users are assured of greater safety from hacking, failure, fraud or theft.

QuarrySwap Liquidity Provider Tokens

LPs receive QuarrySwap Liquidity Provider Tokens (QLP) that represent their **share of pooled liquidity** and a **fee** when other traders access the underlying tokens.

Investor Protection

AI-based **automated smart contract auditing** ensures that smart contracts in the network are authentic and meet QuarryChain's compliance standards and requirements.

Real-world Marketplace

In addition to crypto tokens and NFTs, QuarrySwap users can tokenize and trade physical assets through the DEX's **real-world tokenization** functionality and features.

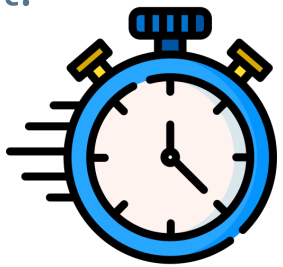
https://quarrychain.network/
alec.arrambide@gmail.com

Tokenization of Real-world Assets

QuarryChain enables tokenization of assets in a **variety of industries** to create **vast liquidity** across the whole global assets market.

Automation

Continuous Trading



Faster Execution

Cost Efficiencies

Fractionalization

Increased Liquidity and Market Depth

https://quarrychain.network/
alec.arrambide@gmail.com

Business Model

QuarryChain generates platform revenues in three ways.

Network Transaction Fees

QuarryChain charges a 0.25% transaction fee. These fees are used to compensate delegates who maintain the platform and cover operational and marketing costs .

Smart Contract / dApp Deployment Fees

A one-time deployment fee is applied to QRC-20 smart contracts launched on the network. E.g. for assets tokenization, Dapp releases, etc.

Asset Tokenization Commissions

QuarryChain receives a 1% commission from asset tokenization payments.

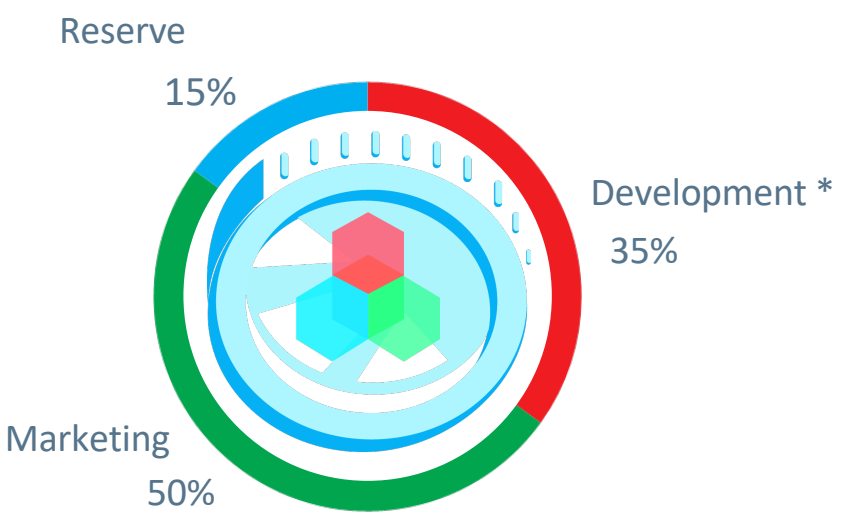
Tokenomics & Use of Funds

Tokenomics

Name	%	Quarry Coins (QRY)
Angel Investors	10	20,000,000
Public Sale	50	100,000,000
Staking/Farming	20	40,000,000
Team	20	40,000,000
Total	100	200,000,000

Use of Funds



* Team recruiting, training, and development

https://quarrychain.network/
alec.arrambide@gmail.com

Investment Opportunity

- **Round:** Seed Offering a 50% Discount ($0.25)
- **Type:** Reg CF
- **Raise:** Up to $5 Million (20,000,000 QRY)
- **Vesting Period:** 4 years (with the ability to unlock 25% of your investment each year)

https://quarrychain.network/
alec.arrambide@gmail.com

Road Map

Phase 1

- Development/Launch of QuarryChain Website
- QuarryChain Seed Round

Phase 2

- Development of DPoS Network
- Development of QuarryChain's Virtual Machine Sandbox
- QRC-20 Development & Testing
- Development of QuarryWallet
- Development of QuarrySwap
- Expanding the Genesis Team

Phase 3

- QuarryChain DPoS Network Launch
- QuarryChain's Public ICO
- QuarryWallet Launch
- Quarry Virtual Machine Launch
- QRC-20 Launch
- CoinMarketCap/CoinGecko Listings
- QuarrySwap Launch
- Development of QuarryWallet Mobile App
- First Delegate Voting Round

Phase 4

- Giveaways
- AMA's
- Further Development of QuarrySwap's Real World Marketplace
- QuarryWallet Mobile App Launch
- Expanding QuarryChain's Ecosystem (DApps)

https://quarrychain.network/
alec.arrambide@gmail.com

Summary

QuarryChain is an **advanced blockchain network** and **ecosystem of tools** that leverage DPoS consensus to **solve major roadblocks** to the continued growth and adoption of blockchain technology.
